## **Experience:**

August 2025 - Present

Self-Directed Projects & AI/Agentic Automation Development and Cybersecurity

- Developed AI-powered automation workflows using LangChain to orchestrate LLM-based tasks, including note rewriting and automatic flashcard creation.
- Built and tested agentic automation systems for personal productivity, demonstrating real-world AI agent behavior and workflow integration.
- Practiced web exploitation and security testing through HTB Certified Web Exploitation Specialist course, applying security principles to automation design.

January 2023 - August 2025

Software Developer & Support Manager, Digma Finland Oy

- Designed and deployed Python-based RPA solutions, including API integrations and database interactions, to automate enterprise workflows.
- Maintained a large-scale enterprise file transfer/transform system, ensuring data accuracy and secure handling of sensitive information.
- Collaborated with technical and business teams to refine automation logic, improve scalability, and validate API functionality.
- Supported citizen developers in automation projects, including documentation and troubleshooting.
- Rebuilt and managed client relationships through technical demonstrations and solution proposals.

May 2017 - August 2021 (Summers while studying for B.sC in Mech. Eng.)

Mechanical Engineering Trainee, Wärtsilä Oy

- Conducted engineering calculations and system tuning for engine projects.
- Managed technical documentation and supported installation and calibration tasks across international client projects.

## Leadership Experience

### Finnish Army Reserves (Dragsviikon Maakuntajoukkue)

- Led a platoon of 30 personnel in high-pressure environments, managing training, logistics, and operations.

- Developed strategic thinking and problem-solving skills applicable to cross-functional technical teams.

Skill	Key
- Delivered multiple full-cycle automation projects with measurable efficiency gains, including client-facing RPA solutions.	
- Built and tested agentic workflows using LangChain for personal productivity, demonstrating LLM orchestration and task chaining.	
- Mentored citizen developers in automation practices, improving team-wide adoption of scripting and workflow tools.	
- Applied security principles from cybersecurity training to automation design, ensuring robustness and data integrity.
